New reconstructed study: locked data accounting

Original Metro vector unavailable; no original-date reconstruction claim

Fixed reconstructed proxy: 8,432 ordinal hours; 20 study nodes

Generated node-hours: 8,432 x 20 = 168,640

L=12, stride=1: 8,420 network snapshots; 168,400 node targets

Snapshots: 4,420 train / 589 validation / 885 acquisition / 2,526 test

One 295-snapshot query exposes 5,900 scalar node labels

Train-only fitted transforms; unchanged split; five model seeds

Fixed data across seeds; causal hourly features; final test evaluated only after validation selection.
